

Presenting the yellow chair to Bregtje van der Haak, producer UBIQUITY Dutch premiere UBIQUITY, cinema EYE Amsterdam

-3 juni 2018-

Dear Bregtje,

We would very much like to offer you this (apparently) empty yellow chair.

This chair is a symbol for all who would have wanted to be here tonight, but cannot because of the harmful health effects of the radiation of our modern technologies.

With this chair we want to give them a place under us. We know they are there.

They belong.

On behalf of us all, I want to thank you, Bregtje, and everyone who has worked so hard to make the UBIQUITY movie possible for their dedication, determination, perseverance, courage and openness.

UBIQUITY shows in a beautiful, respectful way what a fight some of us have to deliver to keep going.

Technology offers opportunities and challenges. This is such a challenge.

The sooner we recognize that electromagnetic fields are harmful to us as humans and the entire ecosystem, the sooner we can go together for solutions.

Otherwise, technologies of the future, such as electric cars, electric cooking, solar panels (the inverters), the Internet of Things and the smart cities and other smart applications will ultimately prove to be not so smart, because they aim for a healthy environment and an inclusive society.

Radiation affects everyone, even if you don't feel it. Some people, animals, plants have a higher sensitivity to wireless radiation, and we do not know what levels of wireless radiation are tolerated by the majority without harming the health of current and future generations.

We live in a transitional period.

Let us take seriously the signals of our fellow human beings, adjust our course and learn from the past. Learning how we dealt with asbestos, smoking and perhaps recognizing the climate problem (almost) too late..

We live in an energy transition.

Let us also include all unnecessary energy consumption of these technologies in our climate agreement. Let's go for a technology that respects our freedom of choice and that is safe, humane and sustainable! So that we can all again participate in our society.

As Let's Talk About Tech, we now take responsibility for current and future generations and our entire ecosystem and ask you all to do this with us in true connection.

We need you!

We go for the solutions.

Let's Talk About Tech
For safe, humane and sustainable technology
